

TradeLoop — One Pager

The back office that runs itself

03 June 2026

The back office that runs itself — for trades.

You're on the tools all day. TradeLoop handles the office while you're there: it answers the calls you miss, follows up the quotes that go quiet, sends the invoices the same day, and keeps your books straight. You just check the two-minute morning rundown.

What it does

- **Answers every missed call in 47 seconds.** A text goes back in your voice and books the job — before they ring the next tradie. 78% of people book whoever replies first.
- **Chases your quotes and old customers.** Automatic 7-day follow-ups bring back work that would've gone cold.
- **Invoices the same day.** Job done → invoice drafted with parts and labour → you tap approve → it's sent and synced to Xero. No more Sunday-night admin.
- **Guards your margins.** Every quote is checked against real cost. Anything thin gets flagged before it goes out — not after the parts bill lands.

Why it matters

Tradies miss roughly **a third of their calls**, and most of those callers just ring someone else. Late invoices cost Kiwi small businesses **\$827m a year**. One recovered job a month covers TradeLoop several times over.

"It books jobs while I'm under a house. I cleared a \$3,840 invoice and confirmed two installs before my first coffee — TradeLoop had already done the lot overnight." — Mike, Pacific Climate Solutions (illustrative)*

What it costs

Solo — owner-operators, 1–2 vans	\$149/mo + GST (\$149 setup)
Pro — small teams, 2–6 staff	\$249/mo + GST (\$149 setup)
Built for you — done-for-you, tailored, 24/7 support	\$1,200 build + \$200/mo

Month-to-month. No lock-in. Works with the Xero and the business number you already use.

See it work

Watch the 60-second demo or get a live walkthrough on your own numbers.
